Skindeep Aftercare

- Keep the area dry and covered for 48 hours following treatment.
- Some areas as advised by your practitioner may need to be covered for up to 5 days.
- Tattoos may blister and have pinpoint bleeding for a few days after treatment. Please note that blistering is completely normal and is NOT heat induced. It is due to mechanical pressurewave technology.
- Normal showering/washing may resume after 48 hours. Keep area moist with Aloe Vera to aid healing. A thin layer only should be applied regularly.
- Apply non-stick dressing over the tattoo when going out/working until it is healed.
- Avoid sun exposure to the treated area. Use a broad spectrum UVA/UVB sunscreen with SPF of 30 or higher. Apply to the treated area every 2 hours when exposed to the sun and it is recommended to make this part of your skin care routine.
- Do not rub or scratch the treated area.
- If crusting/scabbing occurs do not shave or pick area. Keep the area moist and let the crusting/scabbing resolve on its own.
- Discomfort may be relieved by a cold gel pack and/or an over the counter pain reliever. If persistent itching occurs this is normal. Anti-histamines and cold aloe vera from the fridge normally resolve this and the urge to scratch the area.
- If blistering occurs keep the area moist by applying pure aloe vera up to 3 times per day. Do not enter swimming pools or hot tubs until treated area is healed.
- Avoid contact sports or any other activity that could cause injury of the treated area.

Contact the clinic if there is any indication of infection (Redness, tenderness or pus).
